Land-Sea interface: Let’s observe together!

DATA AND INFORMATION ON SENSOR DEPLOYMENT

This form is designed to provide **data and information describing how and when the data was collected**. The information you provide helps researchers, regulatory bodies, and decision-making systems to better understand the data, and to ensure its quality, reliability, traceability, and comparability.

Complete this form at the end of each measurement and instrument (device).

A measurement is defined as a data collection activity that:

- is carried out using the same instrument (device),
- takes place at a specific point/area/transect in time,
- is performed by the same person or by the same group of people.

The measurement could be:

- Continuous measurement (set up the sensor and then leave),
- Occasional measurement (take the measurement while present).

Consult the **user manual** to be guided through the process step by step, explaining what each field requires and why it matters.

DESCRIPTION OF THE DEVICE

* Select your device

EnvLogger

…

** Metadati vedi dopo*

DESCRIPTION OF THE MEASUREMENT 1

* Select your device

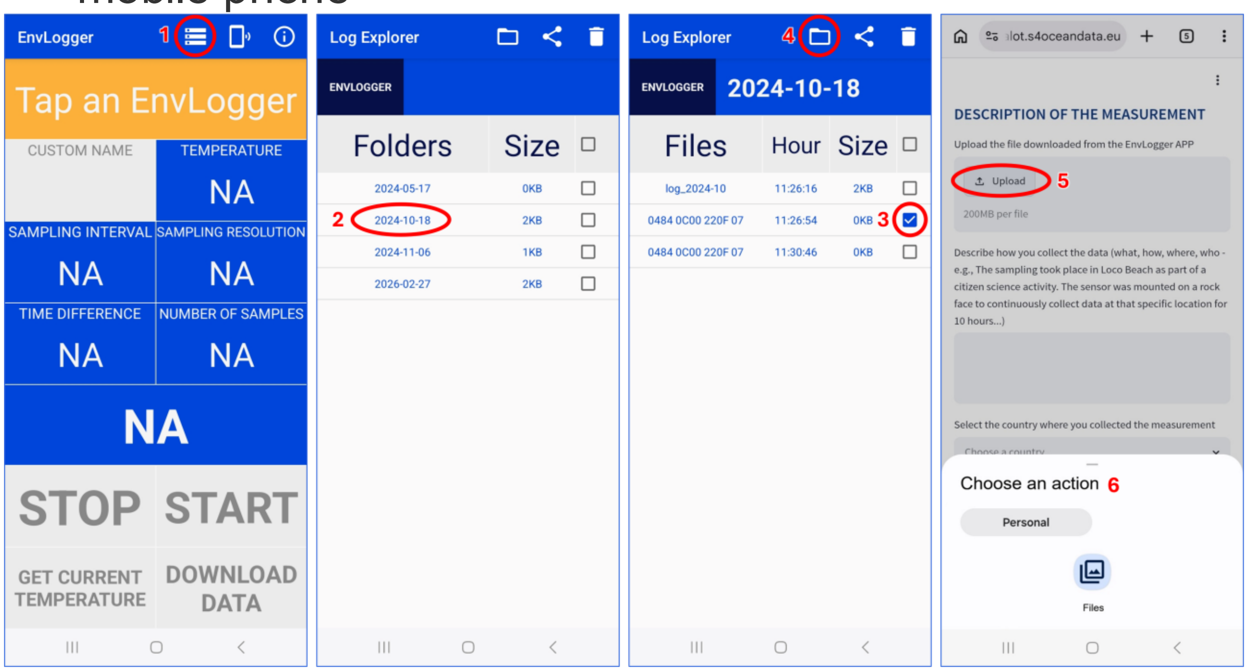
EnvLogger

* Drope the data file downloaded from the EnvLogger APP

Select the file(s) to upload …

How to upload file(s) for EnvLogger

1. Open the files from the EnvLogger app
2. Open the folder for the sampling day
3. Select the file
4. Save the file to your mobile phone in the folder you have selected
5. Upload the data file (as you downloaded it, without making any changes) to the form from the folder on your mobile phone



DESCRIPTION OF THE MEASUREMENT 1

* Describe how you collect the data (what, how, where, who - e.g., The sampling took place in Loco Beach as part of a citizen science activity. The sensor was mounted on a rock face to continuously collect data at that specific location for 10 hours...)

summary

* Select the country where you collected the measurement

Nota: Drop down menu

France | Grece | Portugal | Romania

Sweden | The Netherlands | UK

DESCRIPTION OF THE MEASUREMENT 4

* What kind of user are you?

Citizen | Scientist

* Select the platform type used to collect the data

A platform is any physical or technological system that supports and enables the collection of measurements in a given environment, such as vessels, fixed stations, structure, sampling point

platform_type_sdn_name

beach/intertidal zone structure	offshore structure
coastal structure	research vessel
fishing vessel	river station
float	self-propelled boat
land or seafloor	ship
land/onshore structure	subsurface mooring
man-powered boat	surface vessel
moored surface buoy	vessel at fixed position
mooring	vessel of opportunity
fixed subsurface vertical profiler	vessel of opportunity on fixed route
naval vessel	Other (NERC vocabulary L06)

If applicable, enter the pre-existing platform identifier

platform_id_orig

Write here any additional information on deployment

notes
